

## The Ultimate Gaming Chair-The Best a Gamer Can Get

Serious hungry gamers are going to bite their fingers looking at the **Ultimate Gaming Chair**. We recently had hands on, or butts on experience (literally speaking!) with the chair and we weren't disappointed. It's comfortable enough to support gaming for hours and, if you want to catch your breath, you could just doze off. But with all the stuff the chair has to offer, that's a very very big IF. Chances are mommy and daddy are going to drag off your chair and take you to your bedroom. If you're a born gamer then the **Ultimate Gaming Chair** is the one thing you could sink your teeth into.

### What you are looking at...

Standing before you is the ultimate gaming expansion so far. This leatherwork is guaranteed to teleport you into another dimension. The Ultimate Gaming Chair comes with features that put you right inside the game. It comes with an audio box that fits right under the chair and connects to your console. It also comes with surround sound, stereo speakers and 12 feedback motors that synchronize with gaming action.

### The Sunny side...

- The great thing about the **Ultimate Gaming Chair** is that you could play PC games using a USB 2.0 port. So the chair is not just a console upgrade, it's a PC upgrade too.
- The Chair is there for all to behold. With black leather and soft padding, the **Ultimate Gaming Chair** is good to look at and great to sit on.
- With a couple of speakers beside our heads, surround sound and 12 motors synchronizing action, we found ourselves totally immersed in the game we were playing.
- They didn't forget to add friendly touches like beverage and remote holders. How thoughtful of them.
- The **Ultimate Gaming Chair** costs just \$499 so it won't take half a year to save up for this chair.

### The Shady side...

- While it is compatible with Sony PlayStation, Xbox and Nintendo GameCube, it is not compatible with Xbox 360 and we really wished it did. With all that this chair can do, we would very much like to experience next generation gaming on it.
- It does take a while to get used to the throttle like controllers mounted on each arm rest but once we got the hang of it, it was pleasure playing all the way.
- It's a bit of hassle to set up. The chair comes with antenna like cable covers that are made of hard plastic and require some effort to lock into place. You could call over some Popeye the Sailor in your neighborhood to do it for you. But once it is locked in place, it's all down hill from there.
- We were looking for a headphone port and didn't find one but that's no big deal.

Besides those teensy weensy things we wished it had, the **Ultimate Gaming Chair** is a great deal and a promising aspect for the gaming industry. It's a must have for late bloomers owning first generation consoles and PCs.
